Elante

Overview

Elante offers a solid key storage solution for industrial fleet key management applications. It is a flush mounted key tube with a large key container. Its design harmonizes nicely with most vehicle designs.

Elante uses the proven patented Title key and locking mechanism.

It is ideal for storage of vehicle keys for industrial mobile machinery or industrial fleet.

Construction and installation

Elante has a cast metal construction. Its white color matches most commercial and industrial fleets. The lock is protected against dust and moisture by a rubber lid. Also the container lid has a protective rubber. Elante is delivered with mounting accessoires (rivets, screws, mounting rubber).

Operation

Open the protective rubber lid that's hiding the Title lock and insert a Title key.

Turn the key 180° clockwise and take the lid off the container.

You have now access to your key.

Place the lid back on the container and turn the key 180° anti clockwise to lock it again.

Applications

Key management of industrial mobile machinery and industrial fleet.

Guidelines

We recommend that you do not let the keys in the key box unnecessary. Elante is a convenience product, not a security product.

Standard Features

- Cast metal construction
- Excellent weather resistance
- Large storage capacity
- Patented Title locking mechanism, uniquely customized per customer
- Provides quick access to vehicle keys
