Magnum

Overview

Increase the efficiency of your business! Keep the keys with the vehicle using GE Security Supra Magnum.

The Magnum attaches easily to the window of any vehicle. It has a large storage volume and it is very strong and secure.

Magnum can be used at car dealerships, car rental companies, long term parking, service centers,....

This model is available with a patented secure Title lock mechanism or with the GE Security TouchPoint pushbutton combination lock, with 1024 possible combinations.

For those applications where window access is impractical, a permanent-mount version is available.

Construction and installation

The Magnum is made of non-corrosive zinc alloy and is GE Security's most durable and strongest key box. It uses the proven Title Lock mechanism.

The Title lock is protected against dust and moisture by a lid. The padded foam back prevents damage to the vehicle window. No tools are needed to install the Magnum: it attaches easily to the window of any vehicle with a stainless steel hanger, that is securely riveted to the key box.

Operation

Opening the lock lid, reveals the lock.

Insert the Title key in the lock and turn it 180° clockwise.

The lid of the key box will open. It is attached to the key box body by a rubber strap.

Remove the vehicle key for use.

Close the key box, by inserting the lid in the key box.

Turning the Title key 180° anti-clockwise will lock the key box again.

Applications

Car manufacturers, industrial fleet, parking & valet services, coach companies, service centers, distribution centers, car dealerships, leasing companies, hire car companies, import/export centers, auction houses, car clubs,...

Standard Features

- Very solid and secure
- Big storage volume
- Patented secure Title lock mechanism, uniquely customized per customer
